Reminder;

You could experience low water pressure, even NO water during this time. Your water could be a little cloudy and discolored for a few hours, during and after flushing. Using a high flow faucet (ie Tub, utility sink or outside sill cock), **that is close to where your water service enters the home**, run COLD water clear before use. This protocol should help mitigate any discolored water from running throughout your plumbing system and into your hot water tank. This schedule is a guide and subject to change, call the office or watch our website for any updates.

Thank you for your patience!

Thomas D Cusick Jr.

Superintendent

Groveland Water and Sewer
